 October, 2004

“EMR” ELECTRONIC MEDICAL RECORDS

With the EasyMed EMR software feature you can store all your patient information into a separate folder on the computer for each patient.

EasyMed EMR provides a powerful user friendly interface for entering patient information, treatment notes, vital signs, prescriptions, even complete SOAP Notes.

Screens are designed to let you simply point and click on preprogrammed choices from pop up lists, for fast data entry. You can customize these lists for your practice. The list entries can even contain choices; for example: The patient was/wasn't in pain.

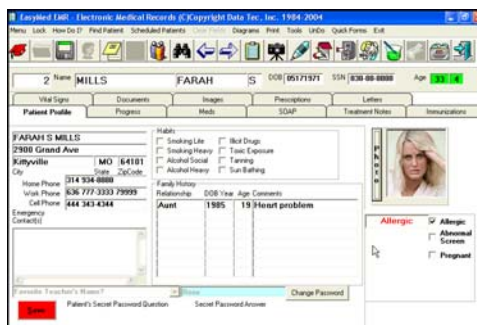

You can create your own

shorthand language for entering entire paragraphs with one word.

By using one of the new wireless Tablet PC's you can access your entire patient records system from any location in the office.

You can also enter data using a pencil "Stylus" and write notes in your own handwriting. Your handwriting is translated to typed text right into the patient record.

EasyMed EMR directly interfaces with your scanner. Any paper records such as lab or pathology records, pictures or x-rays, can be

quickly scanned or imported directly into the patient folder.

When documents are scanned, they are automatically converted to PDF Files for efficient storage.

Find out more info and get started today, by viewing our Flash Videos at

October Updates

- If your Update CD is not enclosed with this Newsletter, it should arrive during October.
- Again in order to reduce paper usage the update Menu has an option to let you View the enhancements on the screen.

CD BACK UP WARNING

With the advent of Writable CD and DVD Drives, many clients are backing up EasyDent to CD's or DVD's.

This is wonderful as long as you know what you are doing.

You must copy the entire \EZW folder and all sub-folders and files from your main computer to the CD or DVD.

Common mistakes include, moving the files instead of copying them,

Billing Made Easy

Are you still printing your patient statements on paper?

Did you know you can generate an electronic file and send your statements for about 10 cents per statement more than your current costs.

Paper statements cost from 46 to 50 cents each, postage, envelope, return envelop, paper and ink. This doesn't include labor!

You never have to stuff another envelop again, and you don't have to stock paper, envelopes, or postage.

If you like to review your statements before you send them, no problem. EasyMed lets you view them on the screen, eliminate ones you don't want to send, and even put notes on the statement before they are sent!

You can even try the process to see how it works, without out sending or printing anything. Just check the two boxes "View Statements First" and "Check for Test Run Only" on the bottom of your statements processing screen.

This will generate an electronic file without updating the patient records.

When you view the statements on the screen, you can click the center of the screen and enlarge the Font Size on the Screen, for easier reading.

You can sign up for the service to send the claims, and there is no

additional software charge! You can try out the service and if you like it, use it. If not, just don't, use it.

We have several clients that have been using this feature for a long time and simply love it.

There is an additional sheet of information enclosed, take a closer look then please call us to get started!

WINDOWS XP SERVICE PACK 2— UPDATES

The new Microsoft Windows XP Service Pack 2 is available to be downloaded via your high speed internet connection, and installed onto your computers using Windows XP.

We have installed the updates and EasyMed works fine without any problems.

The updates include many new security features and fixes to the Windows XP operating system.

Some of the security features include, internet pop up blocker, improved protection for your outlook email address book and automatic activation of a firewall.

One of the great new features is the

much improved hand writing recognition for the **Tablet** Version of Windows XP.

You can see exactly what Service Pack 2 will do for you by going to the web site:

<http://www.microsoft.com/windowsxp/sp2/features.msp>

New Off Site Back up Available

Now it is easy to create automatic out of the office back ups! There is a web site service that specialized in storing data back ups. You can store up to **5 Gigabytes** of space for just **\$10/month**.

A typical **EasyMed** data size is less than **1/2 Gigabytes** (500 Meg or less). And if you create a compressed back up (which is an **EasyMed** option), the size is generally 100 meg or less. This means you store several historical back ups on the web service and still use less than the 5 Gigabytes.

The back ups can be set to run automatically each day over lunch, in the evening, or during the night. Basically any time you want.

1. The back up is **out of your office**, if you have a fire, computer theft, water damage, or other disaster, your data is still safe.
2. It can be set up to run **automatically**, there's no more forgetting to back up or not backing up while certain staff is on vacation, etc.

How Safe are your Patient Files?

Fires, Water Damage, Theft, even Tornados, are all ways that you could quickly lose all your patient paper records. But, if you use our new EMR software, you can take a computer back up home with you.

Remember a smart person learns from their mistakes, but a super smart person learns from others

Thanks again, for your continued; ideas, support, and assistance.
