

ICD9 Codes 2010

After you install the latest PowerSoftMD updates from the Internet, you can update your diagnosis code list as follows:

- 1. Back Up your system for safety.
- 2. Select the Utility Menu, then the Diagnosis Codes option.
- 3. Scroll down through your list to see how many in-house customized codes you used. Typically, less than 1000. Write this number down.
- 4. Click the “**Load New ICD9 Codes**” button.
- 5. Reply “Yes” to the first prompt.
- 6. Type in the password **ICD92010** and click OK.

(Note: you will be prompted if you wish to use the short or long descriptions.
We highly recommend using the short descriptions.)

- 7. Type in the starting number for the standard code list to be loaded in at, typically 1001. But, let’s say you had 1453 codes of your own. Then we would recommend 2001 or even 3001.
- 8. When prompted reply “Yes” to load the codes.
- 9. The complete code list will be filled in starting at the position you specified in step 7, and onwards. Your original in-house custom codes should remain unchanged.

NOTES:

- 1) The following pages explains how to update your PowerSoftMD system from the Internet.
- 2) Find out information directly from the government web site concerning the codes at:
www.cdc.gov/nchs/icd.htm

PowerSoftMD

Updates via the Internet

WARNING – We always highly recommend making sure you back up before applying any changes.

From a Work Station or the Main Computer.

1. Do one of the following:
 - Open PowerSoftMD, from the Primary Menu select the Top toolbar “Tools” option then “Internet Download Updates”.
 - or
 - If viewing the Version Update Reminder Screen select the Green button.

You will be prompted with a message telling which **drive letter** you will Need to use when you unzip the download file, **make note of it.**

2. This should link to our update file and allow you to download it.
3. Once downloaded, change the folder name from **X:** to **Z:** where **Z** is the network drive letter you use to network. (Typically H:\ or G:\, whatever letter you made note of in step 1 above.)
4. Next click the Unzip button.
5. When prompted for a password it is **superup2009**
6. After the files are unzipped your main computer will be updated, you **must update each work station.** Use the top Toolbar Menu “Tools” option, then “Work Station Update” to update each work station.

NOTE: If the unzip password doesn't work, contact Data Tec and ask for the Current Internet Update Password.
