Non-Browse Mode Schedule Setup

- 1) You must update your main computer to the latest Internet updates and then all your work stations. Page 2 explains how to do this.
- 2) Everyone must exit the schedule at all computers.
- 3) From the Primary Menu select the top toolbar “Tools” drop-down menu, then “Options” or “Options Setup”.
- 4) Check a green option called “Recommended – Schedule without Browse Mode”
- 5) Press the blue “Save/Exit” button. Once you check this on one computer, you should NOT have to check it on any other computer.

You are done! ☺

PowerSoftMD

Updates via the Internet

WARNING – We always highly recommend making sure you back up before applying any changes.

From a Work Station or the Main Computer.

1. Do one of the following:
 - Open PowerSoftMD, from the Primary Menu select the Top toolbar “Tools” option then “Internet Download Updates”.
 - or
 - If viewing the Version Update Reminder Screen select the Green button.

You will be prompted with a message telling which **drive letter** you will need to use when you unzip the download file, **make note of it.**

2. This should link to our update file and allow you to download it.
3. Once downloaded, change the folder name from **X:** to **Z:** where **Z** is the network drive letter you use to network. (Typically H:\ or G:\, whatever letter you made note of in step 1 above.)
4. Next click the Unzip button.
5. When prompted for a password it is **2011update**
6. After the files are unzipped your main computer will be updated, you **must update each work station.** Use the top Toolbar Menu “Tools” option, then “Work Station Update” to update each work station.

NOTE: If the unzip password doesn't work, contact Data Tec and ask for the Current Internet Update Password.
