Data Conversions

Data conversions range widely in difficulty. The cost of conversions is from \$ 500 to \$ 4500. Generally Patient demographics (name, address, birth date, social security number, telephone numbers, etc.), patient balances, insurance carriers and fee schedules are typically converted. Sometimes we are also able to capture financial ledger history (the detailed transactions).

PowerSoftMD does have a built in Data Import for patient demographics, of course in a specified format.

We are glad to look at an existing system to evaluate the conversion possibilities
There are different methods to accomplish this.

1. If you have access to High Speed Internet (DSL or Cable), you can use allow us to connect to your computer, under your control. This was we can look at your current system, as it runs on your current computers.
2. If you can back up your current system entirely onto a Zip Disk, CD, or USB Jump drive and mail it to us, sometimes we can restore it to our computers and check it out.
3. Some systems have file export capabilities. If your current software can export data into ASCII "text", Excel "Spreadsheet", or Access "Database" format, we can generally use this data for the conversion.
4. Many times vendors have cooperated and exported your data into ASCII "text", Excel "Spreadsheet", or Access "Database" format, we can generally use this data for the conversion.
5. Some practices have even shipped us their old computer for the conversion.

Again, we can give you a fixed price quote once we see your current systems software and data files.
