# Electronic Lab Requests via LabCorp

This documents the integration with LabCorp for sending and receiving lab request information. Before you can send labs to LabCorp you must be setup and certified by LabCorp and Data Tec. Please call us to discuss this process and to get started.

Sending Lab Requests

1. At the top of the related SOAP note, click the Print button and on the pop up window click the Lab Request Electronic button to open up the lab selection screen and finally click LabCorp Labs.

2. On the LabCorp test screens, make sure the diagnosis and other information, including the doctor the request is sent under and who will be billed for the work is all correct, then select a type of test to send, AFP, Blood lead, Cytology, or "Other" and select and add all the tests that you want to send.

3. Now you can exit back to the main LabCorp interface screen and click the Send Requests button to send the electronic requests.

4. The screen to print the paper requisition should automatically appear, select your printer and click the green button to print a paper copy. Fax this requisition to LabCorp to complete your order.

Receiving Results

1. From the Primary menu, at the bottom left of the screen, click on the Labtrack button.

2. On the Labtracker, click the bottom left Lab Folder Monitor button to open the Monitor screen.

3. On this screen, click the Monitors option at the top and select the LabCorp Monitor. You can leave this program running to monitor the incoming folder for new messages from LabCorp and automatically import them to the Lab Folder Monitor.

4. From here on the Monitor screen you can click on imported messages to view them, print them, and to store them to the individual patients.
