TSPrint Cloud Printing Solution

Dear Doctor & Staff,

Good news! We have found a solution to improve using your local printers with the PowerSoftMD Cloud.

It's a product called **TSPrint** from **TerminalWorks,** which automatically connects your local default windows printer whenever you connect to the cloud session. If you need to switch to a different printer, all you have to do is change your local computer default printer.

We have tested this in a large, heavy-volume environment and it work great!

It costs a one-time fee of $79 per workstation **or** $400 for an unlimited number of work stations.

You can read about it at the link below:

www.terminalworks.com/remote-desktop-printing

Let Us Know:

If you decide to implement this solution, we will install it on your cloud server and assist you in installing it on each of your workstations.
